

ALVINE LUMITI MAKUTU

Full-Stack Developer

+254 794 454 841 · makutualvine@gmail.com · linkedin.com/in/alvine-lumiti · github.com/Mal-archLumi · Nairobi, Kenya

PROFESSIONAL SUMMARY

Final-year BSc Information Technology student at Mount Kenya University (graduating December 2026) with production-grade experience shipping full-stack applications used by real users in live environments. Currently serving as IT Support Intern at PCEA Kikuyu Hospital, where I built QR Master — a desktop automation tool that replaced a fully manual ID card production workflow and is actively used by hospital staff. Technical Lead of the AWS Student Builder Group, leading a 10-person team delivering cloud-hosted platforms. Comfortable across the full stack: React, Node.js, Python, Firebase, AWS, and MongoDB. Seeking to bring practical shipping experience, a collaborative mindset, and genuine enthusiasm for software craft to the ZephyraTech Associate Full-Stack Developer role.

TECHNICAL SKILLS

Frontend	React, Next.js, Tailwind CSS, HTML5/CSS3, Figma, responsive design, UX iteration
Backend	Node.js, Express, REST APIs, WebSocket, JWT authentication, middleware design
Databases	MongoDB, Firebase Firestore, PostgreSQL, SQLite — schema design, querying, migrations
Cloud & DevOps	AWS (EC2, S3, IAM), Firebase Hosting, CI/CD pipelines, Git/GitHub, Docker basics
Languages	JavaScript/TypeScript, Python (Pandas, NumPy, automation), SQL, Dart/Flutter
Dev Tools	VS Code, Postman, Linux CLI, Jupyter Notebooks, Agile/sprint workflows

PROFESSIONAL EXPERIENCE

- IT Support Intern · PCEA Kikuyu Hospital — ICT Department

May 2026 – Present

 - Built QR Master — a Python desktop application that automated bulk student and staff ID card production, eliminating a fully manual QR-code generation, photo matching, and file organisation workflow; the tool is actively used by hospital staff and delivers measurable time savings across large batches.
 - Provide front-line technical support across clinical and administrative workstations in a mission-critical healthcare environment — diagnosing hardware, software, and network faults to maintain system uptime.
 - Maintain the ICT asset and issuance register, manage OS updates and patch compliance, and configure user accounts on the Hospital Information System (HIS) with RBAC and least-privilege principles.
 - Prepare weekly fault-resolution reports for the ICT Supervisor and deliver on-the-spot user training to improve digital competency across clinical staff.
- Technical Lead — AWS Student Builder Group · Mount Kenya University

Jul 2025 – Present

 - Lead a 10-person cross-functional engineering team through agile sprints, owning architecture decisions, code review, deployment pipelines, and milestone delivery for cloud-based full-stack projects.
 - Architected, built, and maintain awsmku.live — a production platform serving 200+ active users — as sole end-to-end technical owner covering cloud infrastructure, security, CI/CD, and ongoing monitoring.
 - Facilitate technical workshops on Python, SQL, Linux CLI, REST APIs, and cloud fundamentals for 50+ students; mentor peers on secure deployment and maintainable system design.

KEY PROJECTS

- QR Master — Hospital ID Card Automation Tool — Python · Desktop · CSV Processing · QR Codes

2025 – Ongoing

 - Built during the hospital attachment to solve a genuine operational problem: fully automated bulk ID card production for 300+ hospital and student records, replacing individual manual QR generation and photo matching with a single desktop workflow.
 - Features include CSV batch processing, fuzzy photo matching, duplicate detection, QR code generation, and offline operation — production-used and delivering real productivity gains in a healthcare environment.

AWS Student Club Platform — awsmku.live — *React · Firebase · Node.js · AWS* Jul 2025 – Apr 2026

- Designed and deployed a full-stack production platform (200+ active users) with role-based dashboards, event management, authentication, and real-time analytics; responsible for cloud infrastructure, security architecture, and CI/CD as sole technical owner.
- Implemented three-tier RBAC via Firebase Security Rules, configured DNS/SSL, and iterated on UI/UX based on user interaction data — achieving a 40% increase in active engagement.

DevKazi — Real-Time Team Collaboration Platform — *MERN Stack · WebSocket · JWT · MongoDB*

Sep 2025

- Architected a multi-tenant platform: Node.js/Express REST API, MongoDB data models, JWT authentication, WebSocket real-time messaging, and RBAC — optimised for 50 concurrent users at sub-200 ms latency.
- Implemented end-to-end audit logging for user sessions and project state transitions, building accountability and incident traceability aligned with enterprise compliance standards.

EDUCATION

BSc Information Technology · Mount Kenya University, Thika

Sep 2023 – Dec 2026

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Databases & SQL, Web Technologies, Cloud Computing, Network Fundamentals, Operating Systems, ICT Project Management.

CERTIFICATIONS

- Certificate in Software Engineering — MERN Stack · Power Learn Project Africa (16-week accredited) · 2025
- Python for Data Science · AI Community Africa / DataCamp Scholarship · Feb 2026
- AWS Cloud Fundamentals · Amazon Web Services / Mount Kenya University · 2025
- Internet Society — What the Internet Needs to Thrive · May 2026
